SOFTWARE ENGINEER

TAN PHAT VO

Email: phatvo73.dev@gmail.com
Phone: 0779342459 (***Whatsapp/Zalo***)
Ho Chi Minh City, Vietnam | ***Website here***

PROFILE

Senior backend engineer (6+ years) building .NET, Go and Java services in BANKING (ANZ, Sacombank) and ENERGY (Halliburton), on AWS, Azure and GCP. AI-first: Claude Code writes ~80% of my PRs and cut feature lead time from one sprint to ~3 days. At ANZ: 9 ANZ Plus Go + gRPC services and Project Bifrost (in progress; target ~2M customers to migrate). At Halliburton: an offline-first app used by 3,000–5,000 rig engineers and 5x faster search.

TECHNICAL SKILLS & COMPETENCIES

ADVANCED BACKEND AND SYSTEM ARCHITECTURE

- **Core Stack:** Expert in .NET Core (C#), Golang, Java (Spring Boot), and Python. Deep understanding of Concurrency, Memory Management, and Asynchronous programming patterns.
- **System Design:** Proven track record in designing scalable Microservices & Event-Driven Architectures using DDD (Domain-Driven Design), Onion Architecture, and SOLID principles.
- **High-Performance APIs:** Designing low-latency gRPC (Protobuf) and RESTful APIs. Implementation of Secure Coding standards (OWASP), resiliency patterns (Circuit Breaker, Retry), and Caching strategies (Redis)

AI ENGINEERING & AGENTIC WORKFLOWS

- **Agentic Coding & AI-First IDEs:** Deep expertise in utilizing Cursor Pro and Claude Code as the primary autonomous development stack. Leveraging advanced features (Cursor Composer, multi-file codebase indexing) for complex architectural drafting, legacy refactoring, and rapid microservices generation.
- **LLM Ecosystems & Integration:** Advanced implementation of the Anthropic ecosystem, integrating cutting-edge LLMs into backend data processing pipelines. Mastery of Context-Aware Prompting and RAG-based (Retrieval-Augmented Generation) code generation workflows.
- **Autonomous QA & Debugging:** Deploying AI agents for self-refining test generation (TDD for gRPC/REST API contracts), semantic log analysis, and automated architectural bottleneck detection.

DATABASE ENGINEERING & EVENT STREAMING

- **RDBMS Mastery:** Advanced proficiency in SQL Server, PostgreSQL, and Oracle. Strong skills in Query Optimization, Indexing Strategies, Stored Procedures, and complex Schema Design for high-volume transactions.
- **NoSQL & Big Data:** Experience with DynamoDB (Serverless patterns) and Google BigQuery for data warehousing and analytics.
- **Message Brokers:** Implementing decoupled communication using Kafka, RabbitMQ, Azure Service Bus, and GCP Pub/Sub. Proficient in handling Dead Letter Queues and Event Sourcing patterns.

CLOUD INFRASTRUCTURE & DEVSECOPS

- **Cloud Native Platforms:** Hands-on expertise with Azure infrastructure, GKE (Kubernetes Engine), Cloud Run, AWS Lambda, EC2, and S3. Expertise in designing Serverless and containerized solutions.
- **DevOps & CI/CD:** Building automated pipelines using GitHub Actions and Azure DevOps. Orchestrating containers with Docker, Kubernetes, and Helm Charts.

EDUCATION

Ton Duc Thang University ..... *2018 -2023*
Bachelor of Information Technology .....*Ho Chi Minh City, Vietnam*

EXPERIENCE

ANZ Bank (Australia) – Digital Banking Division **Dec 2024 - Present**
Software Engineer (via HCLTech Vietnam)

- ***AI-Driven Agentic Workflows:*** *Started on GitHub Copilot, now fully on Claude Code; ~80% of my PRs are written with it, cutting feature lead time from one sprint to ~3 days (~2x delivery).*
- ***Autonomous QA & Contract Testing:*** *AI-drafted unit tests keep 90%+ coverage on the International Money Transfer (IMT) gRPC contracts; AI-assisted onboarding cut ramp-up on a new service from 1–2 months to ~2 weeks.*
- ***High-Performance Core Banking:*** *Own and contribute to 9 ANZ Plus Go and gRPC services on GCP, including PayID alias, PayTo, disputes, self-service and IMT. Project Bifrost (still being built): I joined from planning and build the scheduler, worker and CRN creation flow; target ~2M customers to migrate.*
- ***DevSecOps & Cloud Infrastructure:*** *Run services on GCP (Cloud Run, Pub/Sub, BigQuery) and GKE with Helm; GitHub Actions CI/CD with SonarQube and Fortify gates on every deployment; Agile/Scrum team across Vietnam, Australia and India.*

FPT Software – Offshore for Halliburton (Oil & Gas) **Jan 2022 - Dec 2024**
Senior Backend Developer, later Lead (.NET, C#, Azure) – team of 5 (3 mid-level, 1 intern)

- ***Event-Driven Enterprise Architecture:*** *Built eCompletion Tools, a WPF app used by 3,000–5,000 rig engineers worldwide. LiteDB keeps each job on the machine and syncs when the connection returns; messaging moved from RabbitMQ to Azure Service Bus with dead-lettering.*
- ***System Performance & Scalability:*** *Made LiteDB document search 5x faster (30s down to 3–5s). Maintained SAMS (Sub-Atmospheric Mud System), an ASP.NET WebForms app that classifies SAMS events in tested code (stored procedures, EF Core).*
- ***Automated Delivery & Quality Assurance:*** *Moved sign-in to Azure AD SSO. Azure DevOps CI/CD with Fortify scans; MSTest unit and integration tests across three projects.*

Saigon Thuong Tin Commercial Joint Stock Bank (Sacombank) **May 2020 - Jan 2022**
Software Developer

- ***Fintech Backend Solutions:*** *Developed the core E-invoice and CRM systems utilizing a hybrid stack of .NET Core, Golang, and Java Spring Boot to deliver scalable solutions for high-frequency banking operations.*
- ***API Optimization & Reliability:*** *Collaborated within an Agile SDLC to optimize RESTful API response times, ensuring robust data consistency and seamless integration across diverse banking modules.*

CERTIFICATIONS & LANGUAGE

IELTS 6.5 (IDP), TOEIC 700+.....
Power Platform Developer Associate (Microsoft) .....
