Ho Chi Minh City, Vietnam

PROFILE

Senior software engineer with 6+ years of backend work in banking, oil and gas, and logistics. I currently work on the ANZ Plus backend team at ANZ Bank (via HCLTech Vietnam), building Go and gRPC services on GCP for PayID, PayTo, disputes, self-service and customer profile, and contributing to Project Bifrost, which moves customer and account data from ANZ classic banking and Suncorp Bank into ANZ Plus. I use agentic coding with the Claude Code ecosystem day to day for implementation, refactoring and test generation; together with AI-assisted testing this contributed to a ~30% shorter time-to-market and 90%+ test coverage on gRPC contracts. I have also shipped an LLM subtitle pipeline (Azure OpenAI, Azure AI Speech), a 20x faster document search for Halliburton, and a more than 60% cut in observability cost at Bolloré Logistics.

TECHNICAL SKILLS

Applied AI: agentic coding with the Claude Code ecosystem; AI-assisted unit and contract test generation; LLM integration in backend pipelines (Azure OpenAI, Azure AI Speech, Anthropic Claude); prompt and context design for code and test generation

Languages & frameworks: Go, C# / .NET (ASP.NET Core, EF Core, ABP Framework), Java (Spring Boot), Python, TypeScript, Angular

APIs & architecture: gRPC / Protobuf, REST, microservices, event-driven design, DDD, onion architecture, retry and circuit-breaker patterns, Redis caching

Cloud & DevOps: GCP (GKE, Cloud Run, Pub/Sub, BigQuery), Azure (Service Bus, Azure SQL, Azure AD, DevOps, OpenAI), AWS (Lambda, DynamoDB, S3, ECS, EKS), Docker, Kubernetes, Helm, GitHub Actions, Jenkins

Data & messaging: PostgreSQL, SQL Server, Oracle, BigQuery, DynamoDB, LiteDB; Kafka, RabbitMQ, Azure Service Bus, GCP Pub/Sub, dead-letter queues

Quality & security: Go testing, MSTest, Selenium WebDriver, integration testing, SonarQube, Fortify, OWASP, OpenTelemetry, Splunk

EXPERIENCE

ANZ Bank (via HCLTech Vietnam) – ANZ Plus, Backend Team

Dec 2024 – Present

Senior Backend Engineer

ANZ Plus is ANZ's digital bank in Australia, launched in 2022. Team spread across Vietnam, Australia and India.

- Payments and customer features:** build and maintain Go / gRPC microservices for ANZ Plus: PayID aliases, PayTo and PayTo event handling, transaction disputes, customer self-service, customer profile, and International Money Transfer (IMT).
- Data migration (Project Bifrost):** work on the migration of customer and account data from ANZ classic banking and Suncorp Bank into ANZ Plus.
- Agentic engineering:** ANZ uses the Claude Code ecosystem across engineering. I use it daily to plan changes, generate boilerplate and refactor Go services; AI-written code goes through the same CI and security gates as any other change. This contributed to a ~30% reduction in time-to-market.
- AI-assisted testing:** use AI agents to draft unit tests and edge cases for gRPC contracts, then review and extend them; reached 90%+ test coverage on the IMT gRPC contracts.
- Platform and security:** run services on GCP (Pub/Sub, BigQuery, Cloud Run) and GKE with Helm; ship through GitHub Actions with SonarQube and Fortify gates on every deployment.

FPT Software – Offshore for Halliburton (Oil & Gas)

Jan 2022 – Dec 2024

Senior Backend Developer

- Document search:** reworked document search through stored procedures and EF Core, making search 20x faster on large drilling datasets.

- **Offline-first rig software:** built eCompletion Tools, a WinForms app engineers use on offshore rigs with no network; LiteDB stores data locally and syncs to the central server when a connection returns.
- **Cloud migration:** moved the on-premise MS SQL database to Azure SQL and replaced legacy Active Directory sign-in with Azure AD; moved sync-server messaging from RabbitMQ to Azure Service Bus with dead-lettering.
- **Domain systems:** maintained SAMS (Sub-Atmospheric Mud System), a WebForms app that normalizes well data and classifies SAMS events, working with petroleum engineers on the rules.
- **Quality:** wrote MSTest unit and integration tests across three Halliburton projects and kept Azure DevOps pipelines with Fortify scan gates.

Saigon Thuong Tin Commercial Joint Stock Bank (Sacombank)

May 2020 – Jan 2022

Full-stack Developer

Bank scale at end of 2021: ~10 million customers, ~122,000 POS/mPOS/QR acceptance points (Sacombank Annual Report 2021).

- **E-invoice:** built and maintained the bank's e-invoice system on ABP Framework (.NET Core, Angular) for periodic fees, e-banking charges, loan interest and FX, in line with Ministry of Finance e-invoice rules; added pages, fixed defects, tuned Oracle and SQL Server stored procedures.
- **POS management:** took over the POS management system from an outsourced vendor, then maintained and extended it (.NET, Java Spring Boot) for Visa, Mastercard, UnionPay, NAPAS and QR wallets (MoMo, ZaloPay, VNPay); ran its Jenkins pipelines and Oracle administration.
- **CRM:** worked on the bank's internal CRM system, including its Xamarin mobile app, together with BA and QA.

Stack: .NET Core / ABP Framework, Golang, Java Spring Boot, Angular, Xamarin, Oracle, SQL Server, Jenkins

SELECTED FREELANCE & PART-TIME PROJECTS

- **Bolloré Logistics (now CMA CGM) – Observability migration:** designed and carried out a solo move from Azure Application Insights to Splunk via OpenTelemetry (OTLP, collector, Splunk HEC), cutting observability cost by more than 60%; piloted on the freight quote system, then rolled out to the other .NET microservices.
- **Bolloré Logistics – Freight quote system:** full-stack developer in a team of 10; reworked the core quote search, making it 5x faster, and added feature modules and responsive pages.
- **IOGA.fr – AI video knowledge platform:** lead backend and DevOps engineer; proposed and built a subtitle pipeline with Azure OpenAI (GPT) and Azure AI Speech that transcribes field videos and translates subtitles into several languages, replacing a manual step; ran AWS (Lambda, DynamoDB, S3, ECS/EKS) alongside Azure.
- **Rozitek – Intralogistics automation:** lead backend developer for an AMR robot circuit in a badminton and tennis racket factory; scheduled jobs, webhooks and REST APIs move rackets from raw-material pickup to finished-goods collection in a closed loop, replacing manual transport between stations.
- **Apollo English – ERP:** added CRM, applicant tracking, class and student management and financial reconciliation features; integrated Payoo, VNPay and TopCV; automated deploys to IIS with GitHub Actions for a network of 70+ centers.
- **Infragistics Reveal BI – Automation testing:** built Selenium WebDriver and MSTest end-to-end suites for dashboards, charts and data sources, and wrote SDK guides in Docusaurus.

EDUCATION

Ton Duc Thang University 2018 – 2023

Bachelor of Information Technology Ho Chi Minh City, Vietnam

CERTIFICATIONS & LANGUAGES

Microsoft Certified: Power Platform Developer Associate Microsoft

English: IELTS 6.5 (IDP), TOEIC 700+ Vietnamese: native
