PROFILE

Senior backend engineer (6+ years) building .NET, Go and Java services in two regulated domains: BANKING (ANZ, Sacombank) and ENERGY (Halliburton), on AWS, Azure and GCP. AI-first: Claude Code writes ~80% of my PRs and cut feature lead time from one sprint to ~3 days. At ANZ: 9 ANZ Plus Go + gRPC services and Project Bifrost (in progress; target ~2M customers to migrate). At Halliburton: an offline-first app used by 3,000–5,000 rig engineers and 5x faster search. Targeting backend (.NET or Go) and DevOps roles that apply AI.

TECHNICAL SKILLS & COMPETENCIES

APPLIED AI & AGENTIC ENGINEERING

- **Agentic coding (daily driver):** Claude Code is my primary tool after starting on GitHub Copilot; ~80% of my ANZ PRs are written with it (planning, refactoring, unit tests, gRPC edge cases), cutting feature lead time from one sprint to ~3 days.
- **Agentic workflows & team enablement:** I build and share Claude Code skills, templates and hooks across teams; AI-drafted unit tests and edge cases support 90%+ coverage on the IMT gRPC contracts; AI-assisted onboarding to a new service dropped from 1–2 months to ~2 weeks.
- **LLM integration in products:** Azure OpenAI (GPT) + Azure AI Speech pipeline for video transcription and subtitle translation (500+ hours processed, ~70% time saved); AI field auto-mapping; Gemini and Amazon Bedrock APIs.

BACKEND ENGINEERING: .NET & GO MICROSERVICES

- **.NET / C#:** .NET 10 / .NET 8 / .NET Core, ASP.NET Core Web API, EF Core, Dapper, ABP Framework; MassTransit (Mediator, Azure Service Bus), FluentValidation, Polly, Serilog, Quartz, SignalR; xUnit, Moq, MSTest and Testcontainers; .NET 8 on AWS Lambda.
- **Go:** Go + gRPC (Protobuf) services for ANZ Plus payments and data migration; Gin REST and GraphQL APIs, sqlc, golang-migrate, PASETO, testify, testcontainers-go; Java (Play, Spring Boot), Node.js, Python.
- **Architecture & design patterns:** microservices, event-driven design and CQRS; Clean and Onion architecture, DDD, Repository + Unit of Work, SOLID; multi-tenancy with fail-closed query filters and RBAC; transactional outbox, idempotency keys, optimistic concurrency, retry, circuit breaker and dead-letter queues; contract-first gRPC.

DEVOPS & CLOUD: AWS · AZURE · GCP

- **Cloud platforms:** AWS (Lambda, SQS, S3, ECR, ECS, EKS, Secrets Manager); Azure (App Service, Functions, APIM, Azure SQL, Blob, Service Bus, Azure AD); GCP (Cloud Run, GKE, Pub/Sub, BigQuery); Auth0 SSO.
- **Containers, IaC & CI/CD:** Docker and docker-compose, Kubernetes (GKE, EKS) and Helm; Terraform; GitHub Actions, GitLab CI multi-environment (80% coverage gate, SAST, secret detection), Azure DevOps and Jenkins with SonarQube, Fortify and OWASP gates.
- **Reliability & observability:** OpenTelemetry to Splunk (>60% lower observability cost), p95/p99 latency monitoring, JMeter load tests; SQL Server → Azure SQL and RabbitMQ → Azure Service Bus migrations.

DATA, MESSAGING & FRONTEND

- **Data & messaging:** SQL Server, MySQL 8, PostgreSQL, Oracle and Azure SQL (stored procedures, functions, triggers, query tuning); Flyway and EF Core migrations, Dapper; MongoDB, DynamoDB, BigQuery, Snowflake, LiteDB, Redis; Kafka, RabbitMQ, Azure Service Bus, GCP Pub/Sub, SQS.
- **Frontend (supporting):** Next.js 16, React 19, TypeScript, RTK Query, Tailwind; Angular 12 + NgRx, Angular; React Native (led the Xamarin to React Native migration).

EDUCATION, CERTIFICATIONS & LANGUAGES

Ton Duc Thang University – Bachelor of Information Technology ..... *2018 – 2023*

Ho Chi Minh City

Certification: Microsoft Certified: Power Platform Developer Associate

Languages: English – IELTS 6.5 (IDP), TOEIC 700+; Vietnamese – native

Ways of working: Agile/Scrum in distributed teams (Vietnam, Australia, India)

EXPERIENCE

ANZ Bank (via HCLTech Vietnam) – BANKING & Fintech **Dec 2024 – Present**
Software Engineer, ANZ Plus Backend (Go, gRPC, GCP)

- ***Applied AI (Claude Code):*** *started on GitHub Copilot, now fully on Claude Code; ~80% of my PRs are written with it (planning, refactoring, unit tests, gRPC edge cases), cutting feature lead time from one sprint to ~3 days (~2x delivery). AI-written code passes the same CI and security gates as any other change; I share Claude Code skills, templates and hooks across teams.*
- ***AI-assisted quality & onboarding:*** *AI-drafted unit tests keep 90%+ coverage on the International Money Transfer (IMT) gRPC contracts; AI-assisted onboarding cut ramp-up on a new service from 1–2 months to ~2 weeks.*
- ***Backend (Go, gRPC):*** *own and contribute to 9 ANZ Plus services, including PayID alias, PayTo and PayTo events, IMT, disputes, self-service and customer profile. Project Bifrost: Go migration services on GCP, still being built, to move customer and account data from ANZ classic banking and Suncorp Bank (acquired by ANZ in July 2024) into ANZ Plus. I joined from planning and build the scheduler, worker and CRN creation flow; target ~2M customers to migrate.*
- ***DevOps & cloud:*** *GCP (Cloud Run, Pub/Sub, BigQuery) and GKE with Helm; services monitored on p95/p99 latency; GitHub Actions CI/CD with SonarQube and Fortify gates on every deployment; Agile/Scrum team across Vietnam, Australia and India.*

Halliburton (via FPT Software) – ENERGY / Oil & Gas **Jan 2022 – Dec 2024**
Senior Backend Developer, later Lead (.NET, C#, Azure) – team of 5 (3 mid-level, 1 intern)

- ***Offline-first rig software (.NET, C#):*** *offshore rigs often have no internet, so I built eCompletion Tools as a WPF app that keeps each job in LiteDB on the machine and syncs to the central server when the connection returns; used by 3,000–5,000 rig engineers worldwide. Made LiteDB document search 5x faster (30s down to 3–5s).*
- ***Well data & performance:*** *maintained SAMS (Sub-Atmospheric Mud System), an ASP.NET WebForms app that normalizes well data and classifies SAMS events with rules agreed with petroleum engineers, kept in tested code so QA can check rule changes before release (stored procedures, EF Core).*
- ***Cloud migration & DevOps (Azure):*** *moved sign-in to Azure AD SSO; moved sync-server messaging from RabbitMQ to Azure Service Bus with dead-lettering, so failed rig events can be inspected and replayed instead of lost; Azure DevOps CI/CD with Fortify scans; MSTest unit and integration tests across three projects so QA can verify sync and data integrity.*

Sacombank (Vietnam) – BANKING **May 2020 – Jan 2022**
Full-stack Developer (.NET, Java, Go)

- ***E-invoicing & APIs (.NET Core, ABP, Java, Go):*** *built and maintained the bank's e-invoice system on ABP Framework for fees, e-banking charges, loan interest and FX under Ministry of Finance rules (team of 8); REST APIs and microservices in .NET Core, Java and Go; tuned Oracle and SQL Server stored procedures.*
- ***Payments & mobile (.NET, Java Spring Boot, React Native):*** *took over the POS system from an outsourced vendor and extended it for Visa, Mastercard, UnionPay, NAPAS and QR wallets (MoMo, ZaloPay, VNPAY); in a team of 5, led the Xamarin to React Native CRM app migration, which nearly eliminated crashes.*

Other systems built: energy retail billing & CRM (.NET 10, CQRS, Azure; Java/Play, AWS), AI video transcription & translation pipeline (Azure OpenAI, Speech), logistics observability (cut cost >60%), serverless e-commerce inventory sync (.NET on AWS Lambda, SQS, S3, CloudWatch; multi-channel incl. Shopify).
