PROFILE

Senior backend engineer (6+ years) building .NET, Go and Java services in two regulated domains: BANKING (ANZ, Sacombank) and ENERGY (Halliburton, Tally Group), on AWS, Azure and GCP. AI-first: Claude Code writes ~80% of my PRs and cut feature lead time from one sprint to ~3 days. At ANZ: 9 ANZ Plus Go + gRPC services and Project Bifrost (~2M users migrated, under 1% errors). At Halliburton: an offline-first app used by 3,000–5,000 rig engineers and 20x faster search. Targeting backend (.NET or Go) and DevOps roles that apply AI.

TECHNICAL SKILLS & COMPETENCIES

APPLIED AI & AGENTIC ENGINEERING

- **Agentic coding (daily driver):** Claude Code is my primary tool after starting on GitHub Copilot; ~80% of my ANZ PRs are written with it (planning, refactoring, unit tests, gRPC edge cases), cutting feature lead time from one sprint to ~3 days.
- **Agentic workflows & team enablement:** I build and share Claude Code skills, templates and hooks across teams; AI-drafted unit tests and edge cases support 90%+ coverage on the IMT gRPC contracts; AI-assisted onboarding to a new service dropped from 1–2 months to ~2 weeks.
- **LLM integration in products:** Azure OpenAI (GPT) + Azure AI Speech pipeline for video transcription and subtitle translation (500+ hours processed, ~70% time saved); AI field auto-mapping; Gemini and Amazon Bedrock APIs.

BACKEND ENGINEERING: .NET & GO MICROSERVICES

- **.NET / C#:** .NET 10 / .NET 8 / .NET Core, ASP.NET Core Web API, EF Core, Dapper, ABP Framework; MassTransit (Mediator, Azure Service Bus), FluentValidation, Polly, Serilog, Quartz, SignalR; xUnit, Moq, MSTest and Testcontainers; .NET 8 on AWS Lambda.
- **Go:** Go + gRPC (Protobuf) services for ANZ Plus payments and data migration; Gin REST and GraphQL APIs, sqlc, golang-migrate, PASETO, testify, testcontainers-go; Java (Play, Spring Boot), Node.js, Python.
- **Architecture & design patterns:** microservices, event-driven design and CQRS; Clean and Onion architecture, DDD, Repository + Unit of Work, SOLID; multi-tenancy with fail-closed query filters and RBAC; transactional outbox, idempotency keys, optimistic concurrency, retry, circuit breaker and dead-letter queues; contract-first gRPC.

DEVOPS & CLOUD: AWS · AZURE · GCP

- **Cloud platforms:** AWS (Lambda, SQS, S3, ECR, ECS, EKS, Secrets Manager); Azure (App Service, Functions, APIM, Azure SQL, Blob, Service Bus, Azure AD); GCP (Cloud Run, GKE, Pub/Sub, BigQuery); Auth0 SSO.
- **Containers, IaC & CI/CD:** Docker and docker-compose, Kubernetes (GKE, EKS) and Helm; Terraform; GitHub Actions, GitLab CI multi-environment (80% coverage gate, SAST, secret detection), Azure DevOps and Jenkins with SonarQube, Fortify and OWASP gates.
- **Reliability & observability:** OpenTelemetry to Splunk (>60% lower observability cost), p95/p99 latency monitoring, JMeter load tests; SQL Server → Azure SQL and RabbitMQ → Azure Service Bus migrations.

DATA, MESSAGING & FRONTEND

- **Data & messaging:** SQL Server, MySQL 8, PostgreSQL, Oracle and Azure SQL (stored procedures, functions, triggers, query tuning); Flyway and EF Core migrations, Dapper; MongoDB, DynamoDB, BigQuery, Snowflake, LiteDB, Redis; Kafka, RabbitMQ, Azure Service Bus, GCP Pub/Sub, SQS.
- **Frontend (supporting):** Next.js 16, React 19, TypeScript, RTK Query, Tailwind; Angular 12 + NgRx, Angular; React Native (led the Xamarin to React Native migration).

EDUCATION, CERTIFICATIONS & LANGUAGES

Ton Duc Thang University – Bachelor of Information Technology ..... *2018 – 2023*

Ho Chi Minh City

Certification: Microsoft Certified: Power Platform Developer Associate

Languages: English – IELTS 6.5 (IDP), TOEIC 700+; Vietnamese – native

Ways of working: Agile/Scrum in distributed teams (Vietnam, Australia, India)

EXPERIENCE

ANZ Bank (via HCLTech Vietnam) – BANKING & Fintech **Dec 2024 – Present**
Software Engineer, ANZ Plus Backend (Go, gRPC, GCP)

- ***Applied AI (Claude Code):*** *started on GitHub Copilot, now fully on Claude Code; ~80% of my PRs are written with it (planning, refactoring, unit tests, gRPC edge cases), cutting feature lead time from one sprint to ~3 days (~2x delivery). AI-written code passes the same CI and security gates as any other change; I share Claude Code skills, templates and hooks across teams.*
- ***AI-assisted quality & onboarding:*** *AI-drafted unit tests keep 90%+ coverage on the International Money Transfer (IMT) gRPC contracts; AI-assisted onboarding cut ramp-up on a new service from 1–2 months to ~2 weeks.*
- ***Backend (Go, gRPC):*** *own and contribute to 9 ANZ Plus services, including PayID alias, PayTo and PayTo events, IMT, disputes, self-service and customer profile. Project Bifrost: Go migration services on GCP that move customer and account data from ANZ classic banking and Suncorp Bank (acquired by ANZ in July 2024) into ANZ Plus; ~2M users migrated with under 1% errors.*
- ***DevOps & cloud:*** *GCP (Cloud Run, Pub/Sub, BigQuery) and GKE with Helm; services monitored on p95/p99 latency; GitHub Actions CI/CD with SonarQube and Fortify gates on every deployment; Agile/Scrum team across Vietnam, Australia and India.*

Halliburton (via FPT Software) – ENERGY / Oil & Gas **Jan 2022 – Dec 2024**
Senior Backend Developer (.NET, C#, Azure) – team of 5

- ***Offline-first rig software (.NET, C#):*** *offshore rigs often have no internet, so I built eCompletion Tools as a WinForms app that keeps each job in LiteDB on the machine and syncs to the central server when the connection returns; used by 3,000–5,000 rig engineers worldwide.*
- ***Well data & performance:*** *maintained SAMS (Sub-Atmospheric Mud System), an ASP.NET WebForms app that normalizes well data and classifies SAMS events with rules agreed with petroleum engineers, kept in tested code so QA can check rule changes before release; made document search 20x faster on large drilling datasets (stored procedures, EF Core).*
- ***Cloud migration & DevOps (Azure):*** *moved the database from MS SQL Server to Azure SQL and sign-in to Azure AD; moved sync-server messaging from RabbitMQ to Azure Service Bus with dead-lettering, so failed rig events can be inspected and replayed instead of lost; Azure DevOps CI/CD with Fortify scans; MSTest unit and integration tests across three projects so QA can verify sync and data integrity.*

Sacombank (Vietnam) – BANKING **May 2020 – Jan 2022**
Full-stack Developer (.NET, Java, Go)

- ***E-invoicing (.NET Core, ABP, Angular):*** *built and maintained the bank's e-invoice system on ABP Framework for periodic fees, e-banking charges, loan interest and foreign-exchange transactions, in line with Ministry of Finance e-invoice rules (team of 8); tuned Oracle and SQL Server stored procedures.*
- ***Card & QR payments (.NET, Java Spring Boot):*** *took over the POS management system from an outsourced vendor, then maintained and extended it for Visa, Mastercard, UnionPay, NAPAS and QR wallets (MoMo, ZaloPay, VNPAY) at a bank with ~10M customers and ~122,000 POS/mPOS/QR acceptance points (2021).*
- ***APIs, CRM & mobile (.NET Core, Java, Go):*** *REST APIs and microservices with .NET Core, Java and Go; Jenkins pipelines and Oracle admin; main full-stack developer in a team of 5 on the internal CRM, working with BA and QA; led the Xamarin to React Native migration of the CRM mobile app, which nearly eliminated app crashes.*

ADDITIONAL EXPERIENCE & SIDE PROJECTS

Tally Group (Australia) – ENERGY Retail **May 2026 – Present**

Software Engineer, Tally Plus CORE · Full-stack Developer, Tally CRM

- ***Tally Plus CORE – energy billing (Oct 2026 – Present):*** *multi-brand billing and customer platform for Australian energy retailers (Alinta Energy, EnergyCo, Indigo, Sumo): Java/Play billing API, MySQL 8 rules layer (stored procedures, functions, triggers via Flyway), Angular 12/NgRx agent UI, Node.js correspondence.*
- ***Regulated fees & releases:*** *delivered Late Payment, Paper Bill and Over the Counter fees for Alinta end to end (GST-inclusive reversals, role-based access, audit extracts); Flyway-ordered releases across dev, test, UAT and prod with no data loss; GitLab CI/CD, Docker, AWS ECR/S3, Helm/Kubernetes, Auth0 SSO.*
- ***Tally CRM – multi-tenant CRM (May – Oct 2026):*** *main contributor on a production CRM for energy retailers (SLA case management, B2B pipeline from lead to contract): .NET 10, CQRS with MassTransit, Azure; ~190 REST operations, 47 EF Core migrations, ~16 ADRs; fail-closed tenant query filters + RBAC.*
- ***CRM integrations & quality:*** *quotes priced from live billing via APIM; async billing hierarchy (up to ~5,000 nodes) over Service Bus with outbox and DLQ; contract PDFs via Azure Functions; ~260 backend and ~200 frontend test files under an 80% coverage gate; Next.js 16 / React 19 UI.*

Side Projects & Freelance **Freelance / part-time**

- ***IOGA.fr – AI video knowledge platform (France):*** *Lead Backend & DevOps, team of 6; Azure AI Speech + Azure OpenAI subtitle pipeline (500+ hours, ~70% time saved). Tech: C# .NET, AWS Lambda, DynamoDB, S3.*
- ***Bolloré Logistics (now CMA CGM) – Logistics:*** *Backend / Full-stack Developer; Application Insights to Splunk via OpenTelemetry (>60% lower observability cost); quote search 5x faster. Tech: C# .NET, Azure, MongoDB.*
- ***Rozitek – Smart-factory robotics (AMR):*** *Lead Backend Developer, team of 5; backend for an AMR robot line that carries rackets from raw material to finished goods. Tech: C# .NET, Java, Docker, Linux, REST APIs, webhooks.*
- ***Apollo English – Education ERP (70+ centers):*** *Full-stack & DevOps, team of 6; CRM, applicant tracking, class and finance features; Payoo, VNPay and TopCV via webhooks. Tech: C# .NET, Angular, PostgreSQL, GitHub Actions, IIS.*
- ***Infragistics (Reveal BI) – Embedded analytics SDK:*** *Automation Tester, team of 15; end-to-end suites for dashboards, charts and data sources; SDK guides in Docusaurus. Tech: C# .NET, Selenium WebDriver, MSTest.*
- ***GitHub (github.com/recca5p) – Personal projects:*** *ItemMaster (serverless API), AuthService-GO (auth service), Ecommerce (Onion architecture). Tech: .NET 8, AWS Lambda, Go, Gin, sqlc.*
